

Submucosal fibroid

Risk assessment and screening in perimenopause

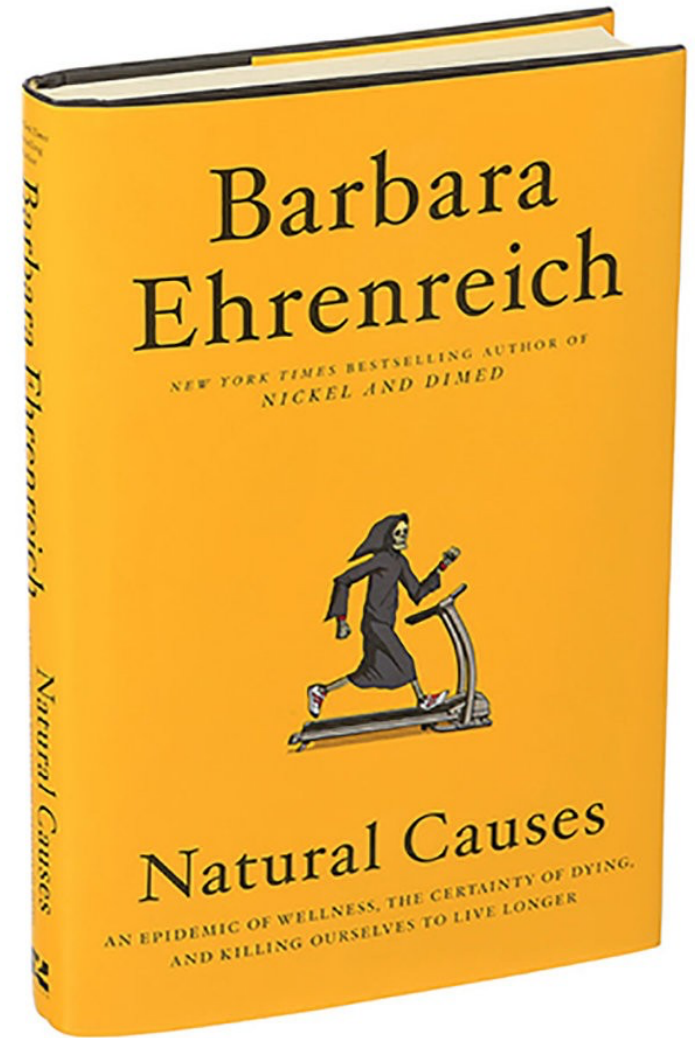

- Take a thorough history
- Identify the patient's three major concerns
- Discuss screening tests
- Discuss healthy lifestyle measures
- Initiate therapy where appropriate for symptom relief.
- Arrange a follow up visit

Always investigate AUB:

Goals should be:

- Exclusion of hyperplasia
- Exclusion of cancers
- Control of cycle
- Management of heavy bleeding
- Contraception

- We should always consider our patients' wishes
- Screening may not be for everyone
- There is a time to stop.
